react-router

Routeur polymorphe pour react

ReactDOM

ReactServer

ReactNative

Installation

```
$ npm install --save react-router-dom
```

```
// App.js
```

```
import {BrowserRouter} from 'react-router-dom';
```

```
<BrowserRouter>  
  <div className="App">  
    <Questions />  
    <QuestionForm />  
  </div>  
</BrowserRouter>
```

Routes

```
<BrowserRouter>
  <div className="App">
    <Switch>
      <Route exact path="/"
        component={() => (<Redirect to="/questions" />)} />
      <Route exact path="/questions" component={Questions} />
    </Switch>
  </div>
</BrowserRouter>
```

Routes avec paramètres

```
<Route
  exact path="/questions/:id"
  component={({match}) => <Question id={parseInt(match.params.id)} />}
/>
```

Liens

```
<Link to={` /questions/${question.id}`}>Voir</Link>
```
